ABSTRACT:

PURPOSE: To provide a dehumidifying-humidifying device which is constituted to reduce a necessary amount of an adsorbent or an absorbent and reduce a consumption power, in a dehumidifying-humidifying device using an adsorbent or an absorbent.

CONSTITUTION: In a dehumidifying-humidifying device formed in a manner that dehumidification is effected in a way that a moisture content in air is adsorbed by an adsorbent 2 and humidification is effected in a way that a moisture held by the adsorbent 2 is discharged, at least either one

of heating
and cooling of the adsorbent 2 is executed by a freezing cycle
comprising a
cooling unit 4, consisting of a compressor 1 and a condenser and a
heat-
exchanger 18 consisting of an expansion valve 6 and a vaporizer.
This
constitution performs arbitrary and high by precise control of
humidity in a
room.
